

Join our Copernicus Department as: Project Manager (m/f/d)

**25+ years of excellence in satellite based geo-information solutions.
Cutting edge technologies, innovations and implementations in over 140 countries.**

Innovative geospatial
data analytics &
IT-technologies

Earth Observation products
and services for environmental
monitoring

Satellite information
supporting client operations
worldwide

**We are seeking a motivated Project Manager to join our dynamic Copernicus team.
You will manage and coordinate developments and projects implementations for
European and global-scale land monitoring.**

Your tasks

- Implementating projects according to established project and quality management standards.
- Planning, monitoring, and documentation of projects, including objectives, budget, schedule, and risks.
- Leading interdisciplinary and international project teams.
- Functional analysis of customer requirements and consulting.
- Assisting in identifying new business opportunities and service offerings in collaboration with our clients.
- Participation to project tendering and acquisition.
- Presenting our products and services during meetings and conferences.

Your profile

- University degree (MSc), preferably in the fields of natural sciences or (geo-)information technology.
- Minimum of 3 years of professional experience as a project manager.
- Relevant further education or certifications are advantageous.
- Good communication and leadership skills. Proficiency in English.
- Willingness to travel.
- Readiness to actively engage in and shape new topics in the field of Earth observation with enthusiasm.

Our offer

- Employment in one of Europe's leading companies for satellite-based environmental monitoring
- A motivated and highly qualified team, making a big difference together
- Part-time or full-time employment with flexible working hours and tele-work
- An appropriate salary that is substantially above the collective agreement with an attractive incentive program
